

My major is Computer science. I originally wanted to go into Cybersecurity but that wasn't available at Chaminade. My next choice was Data Science, before seeing that there was a new Computer Science program that had just started so I decided to give it a try.

I chose to go to Chaminade because it's convenient that my mom works here, and that I've always wanted to go since I was little because my mom and godparents graduated from here. My godsister is also going to Chaminade so at least I have one friend since I don't really talk to other people.

One strength I learned about myself is that I don't mind being alone. A lot of people would fold under the pressure of being by themselves but it doesn't faze me like it used to. Another strength I have is taking the bus. This may seem unusual but to me it's a strength, because prior to this I had never taken the bus by myself before. Going to college means I can't always leave or arrive here when my mom does and that forces me to catch the bus. Now I know how to catch it and get to my correct destination using bus routes. Also I'm a little bit of a germaphobe, and the bus is dirty, and it becomes hard to take it sometimes because sometimes it smells so bad that I have to hold my shirt over my nose. My last strength is learning how to use my mac better. I grew up mostly using windows so learning how to use a mac now that I have one is very important.

One thing I'd like to improve upon is turning things in on time. I have a hard time doing that since I have ADHD and I tend to procrastinate a lot and have trouble motivating myself to do things. I tend to wait until the last moment and then turn things in. So I'm going to try and talk to someone in the counseling center to try and figure something out, whether it be accommodations or something. Normally I'd just struggle through all my classes like this instead of asking for help but I feel like I need to change. I don't like to ask for help because in the real

world I'm not going to have accommodations for my ADHD and I need to learn how to get my work done without it.

I would say my biggest accomplishment this semester is passing Algebra 1. Technically I haven't taken my final yet but I think I'll pass. I'm just worried that since I don't have an A my dad is going to be upset with me because I already took Algebra 1 in 8th grade, and I'm struggling with it a lot now. He says I have a lot of time to study and I should be getting all As in my classes because I have so much time on my hands to do my homework and study. I don't like math though and I don't think I'm very good at it so I would consider passing a class I took 4 years ago an accomplishment.

I didn't choose to take this class, my counselor did. It's required for my bachelors degree so I can graduate. But it's actually been pretty fun and easy, I'm glad I took it. I think my favorite part was when we did the paper airplane competition because I used to fly paper airplanes and was really good at making them.

I think society drives technology. Human's drive and desire to always do better, strive for more, and push the limits is why technology is always improving. For example, Apple and Samsung release new phone models almost every year. Software always updates, it never stays the same for too long. Society is moving at such a rapid pace that computers and smartphones that were top of the line and high tech just 10 years ago seem practically prehistoric now. If anyone tried to use them they'd have a hard time because they're just so obsolete and old.

It's not possible to live life without technology. In this class I learned technology is everything we use in life, not just the electronic stuff. The rocks our ancestors slept on and served as beds were technology, the primitive tools they used to hunt were technology, even something modern

and as trivial as a toothbrush is considered technology. If we didn't have technology we'd be no better than worms (nothing against worms though, they're still cool).

One of my educational goals at Chaminade is getting all As although it's probably impossible. I would also like to graduate, because I lose motivation easily and I don't want to give up halfway through. I'd also like to get a job.

I'd like to join the Navy if I get my degree, the benefits are good. If I don't join the Navy I'll probably just get a regular civilian job. I'd like to go into cybersecurity if possible, but if not I'm sure there are lots of businesses out there that would hire me as an IT person or something.

Even though no one plays the game, I'd like to be known as the best bonk.io player. After I get my degree I think my life will be hard since I might go into the Navy. But even if I don't it will be hard anyways, unless you're a millionaire no one's life is easy. It all comes back to cash.
